

1968

1) INTEREST IN NURSING EDUCATION:

a) I am honored to participate in your in-service training .
 This is really my very first talk to any nurses at the CHILDRENS.
 And I look forward to many more. (These 2 lectures

B) NURSING EDUCATION: (hobby) has been a special interest of mine.

This started while I was in medical school.
 Taught at Simmons Nursing school, partly to
 earn money to go thru medical school. Then
 was asked to teach in their postgraduate
 course during summer.

During residency at MGH taught all 3 years
 of their nursing school, as well as many of
 their inservice training. Also

RADCLIFFE while it was functioning and
 the SALEM NURSING SCHOOL while I was
 resident there 4 months.

More recently BCH and BOSTON COLLEGE nurses,
 last year giving a weekly seminar and rounds
 for senior students and for young graduates.

This is not to boast but to prove that I really
 do have an interest in some of the major problems
 and questions which the nursing profession faces.

• those involving baccalaureate programs vs hospital
 programs, and how to avoid obsolence after a
 few years out of school.

This is also just to let you know that over these
 10 years I have accumulated a stack to the ceiling
 of various lectures for nurses, all the way from
 med-surg courses, to pharmacology to pediatrics,
 to hermental illness, how to deal with med students
 etc.

SO if if you or students ever need a free
 lecture I am always available for an hour.

recently took a
 out of Turkey
 - so I have done to
 appreciate & respect
 source of the problem
 and your profession

(very enlightening - home
 I have to interview.

They gave me
 - Med-surg
 - public health
 - GYN
 - Ped Nursing
 [puzzled over this]
