

Brain.

In dissecting for a demonstration of the brain, cut by a transverse ~~thin~~ section, across the middle of the parietal bones. thro' the cutis ~~the cutis~~ retia mucosum, cutis nervosa, cellulosa et adiposa & the facia ~~aponeurotica~~ expansion of the occipito frontalis muscle, and incising the temporalis. - Then strip off these integuments & turn them over the forehead & occiput. and then, having marked a line by a black string at proper places, saw thro' the cranium, in doing which you cut thro' the os supra orbitis, temporis, parietalis et occipitis & sometimes the temporal process of the os pterygoide. The skull cap is then prised off & the ruptured veins give show their connection of the bones with the meninges by small spots of blood particularly under the sagittal suture. The surface which is now seen, is that membrane enveloping & protecting the brain & is called the dura mater. it being very firm in comparison with other membranes & part in cephalo. nearly under the sagittal suture may frequently be found small glandular bodies called Rachion's glandulae, then pass comes pandey forae in the bones. This membrane has two laminae between which runs the sinus dura mater.

which is manifested thro' it
part. Take up this deura mater by
cutting it thro' on a line with
section of the cranium and turn
it up to wards that part which
is immediately under the saggit-
tal suture & you will find
it connected by veins which
pass to the next membrane of
the brain particularly directly
upward & in the line of the sag-
suture. Have you well for little
glanduloid bodies which are said
to be adipose substance serving
the same purpose as fat does in
other parts of the body. At this part
enter the veins in the membrane
& in order to find out what they
pass. Open the membrane ex-
actly under the sagittal suture
& you will find that the in-
ternal membrane ~~is~~ passes
separates from the external just
before they would meet under
the sag. suture & passing down
convexly internal with regard
to the brain till the next become
one & pass down in the form
of an half moon & called the
falx formed process. The next

This separation & meeting of the laminae forms a triangle having the base externally convex, but the sides concave, externally - thus

& forming a cavity which does not correspond exactly with external figure. This cavity is called a sinus & is a vein thro' which ^{all} ~~the~~ blood is returned. The longitudinal sinus is generally filled with blood & exhibits the mouths of the veins which may be inflated by the inflation of the sinus. Frequently small glands may be found near the mouths of these veins & have been said to serve as valves, but the veins themselves run obliquely into the sinus & preclude the necessity of a valve since they really deserve the title ~~themselves~~. Besides if they were necessary as glands or valves they would be observed more frequently. Little conical sinus pass across the canal.

about of near the Christi Gallie
the sinus is small & enlarges
till it reaches to the occiput
& terminates by the right
& left lateral sinuses & be-
comes jugular veins. Detach
the part of the Falciforme from
from the Christi Gallie & throw
it back which you will find
to be semilunate thick & strong
like the Dura mater. When this is
thrown off ^{convolutions} of the brain
with the beautiful ramification
of the veins & arteries of the pia mater
appears thro' the delicate & trans-
parent tunica arachnoidea. This
tunic lies directly under the
Dura mater investing the
brain and its convolutions
without dipping between them, which
may be proved by inflation.

Immediately under this is the pia
mater ^{from} which is difficultly re-
moved. But it seems to be com-
posed entirely of vessels, a vasa-
lar web, from which are sent
down vessels which nourish
the brain, in so much that the
membranes are called mater

since the ancients believed them
to be produced by them, great
Meninges. The contents of the meninges
are the cerebrum & cerebellum.
The cerebrum is separated from
the cerebellum by a production
of the Dura mater continued
nearly horizontally both
ways sides & supports the cerebrum
from pressure upon the cerebellum.
It is called the tentorium. The

cerebrum is divided into three

lobes, the anterior resting upon the
orbital processes of the os frontis
chiefly; the middle, upon the sphenoid
bone chiefly; & the posterior, upon
the tentorium. It likewise divides

But the first division is in right
& left hemispheres. Separated by
the falsiformed process; each lobe
is then divided into three cerebral
lobes. Open the pericranium
pissure made by a cor. Cal. The
the falsiformed rightward
& that which manages
makes the hemi-
spheres of the brain. marked for they
& you discover the

a broad & white commissure
which connect the hemis-
pheres together. Its breadth
is better than an inch, but the
hemispheres overlap it & meet
each other & is connected by
the vessels of the pia mater.
The external convolutions of the
brain appear white but make
a transverse section & you will
find so only because there was
nothing whiter to compare
with it. But it does not appear
circumstances of to be a kind of
thus called the cortical part
while the inner & greatest
is white & is called the medul-
la. And the hypothesis of its
use is that the cortical part is
the glandular part & that the
medullary is a congeries of
many ducts excreting animal
spirits. By continuing
this transverse section
you will find that
the depth of the fissures
is well from
downward vessel making the convo-
lutions is not more
than a membrane that is an inch & that

The cortical part occupies not
more than $\frac{1}{2}$ inch of the brain &
that is oblige all the convolutions.
Or, that, as we say that the pia
mater passes into the fissures &
envelopes all the convolutions
the cortical part extends $\frac{1}{2}$ an inch
into the brain from this mater.
Continues this section till the
cut surface is nearly on a level
with the white commisuring.
Before mentioned called the
Corpus Callosum. In this
corpus callosum ~~may be~~
generally may be seen two
salient lines with a ridge
between running thro' it
longitudinally. Also sev-
erally shaded, & near ex-
cavated bands running
transversely, which seem to be
narrower than the puckering
of pleating of the cor. Cal. They
some have thought would
explain the many covering
which unaccounted for they
seem not daily to observe.

When the brain is cut down to a level
with the corpus Callosum, you
will find that the part which is
entirely free from med. generation
substance is oval nearly & is called
the Centrinal Ovale. In making
a section of the O to show the Centr.
Ovale. care must be taken lest
the lateral ventricles be not
opened & the demonstration injur-
ed.

March 1st 1813.

This day, the commencement
of spring, smiled on us with peculiar
mildness, but 'Spring' may be like
the hope of man, now brightened
by an effluent sun; beaming
joy & glooming around but tomorrow
~~may be~~ ^{may be} darkened by the clouds of
adversity. Did I say ^{be} may even
now the thick clouds gather in
the west,

"Thick lightning flash & mutter
ering thunder rolls."

and the attack rain is fast falling

This tempest day must be fol-
lowed by cold winds & perhaps
a chilling frost & driving
snow. Is it like matrimony?
at first glowing with the ardor
of love ^{then shortly} interrupted by the storms
of passion.

chilled by slights & neglect, harassed
by jealousy — Perhaps the winter
is correct for the now it storms
& tomorrow comes, the ^{next} day will
be cheered with a clear sun, warming
all around. Tho' now the white
snow is driven by Fœve Boreas
tomorrow we shall enjoy all
the grandeur of the sun-gate morning.

The lectures on Chemistry, the
Theory & Practice, Surgery & Med.
urgery, have terminated & those
on Nat. Med. & Anatomy will
soon have ended, which will be
like cutting the bands of the pul-
grims, pack half away, as
to loosen them, but when I
pass the first ordeal, may God
grant that the tyed bonds ~~may~~
maybe be ~~removed~~ off & the huge weight
under which I struggle fall from
my weary back. That I may
march on, with lighter steps &

with a glad heart, rejoicing with
those who rejoice & only weeping
with those who weep.

I have my popes, but they
say bidders in the inmost recesses
of my heart, may heaven reward
that they may be brought
to light ^{only} they a full gratification
of them. This is my prayer &
may only prevent Hesine. The
spur to all my actions & the
cheerer of my life — But why
this enthusiasm — wishes are
air — popes are lighter than
air — they are evanescent as
the shadow that abideth not.
and is not — but ever follows
us.

Wrote a few words in my
letters which are to go by Mr. Hill
or Mr. Appleton. The Patriot came
to hand this morning, it con-
tains an excellent sketch of Henry
Clay & a super excellent letter

from his Excellency. Elbridge Gerry.

Henceforth & forever I bow to any
of I be in doubt who it is. I
can keep this determination. I
shall have done well. Mortifi-
cation has taught this lesson

Sleep appears to be a ~~partial~~
suspension of consciousness, ~~but~~
dreaming on a partial suspension.

Never retaliate upon a lady.
But do the best you can.

March 2^d Heard the last words
and dying song of B. Barton. He spoke
his own funeral oration. Alas poor
Barton!

Sugar destroys worms, will it
Leeches?

The species of worms are the Jaenic
the Lumbricoides, Aphano Vermiculans
the Ascarides. & the Aphano Lumbricoides
Tricocephalus

March 3^d Rain. Dr Wislar lecture
On nerves. He told us yesterday

~~came off from~~ entered the right
subclavian. Yesterday I passed two
Ladies & in conformity to my deter-
mination turned back & bowed.

March 4th Study Bartons Lectures
very hard, at eve. went & tea to Dr Bar-
& was prevented examination by Jc - y
lecturing. He spoke of the discoveries
of the remain of ancient American
antiquity near Campechy. also of the
Sebidium conspicuum, the most
beautiful of the herbaceous plants -
I gave seeds. Magnolia - conspicua.
some blossoms - Peronea

March 5th Studying for the
Jury ordeal. Sometimes quite
disponding, at other cheered by
some slight rays. hope that
fortune change may favour
me. which God grant.

Spent evening at Boston. He ex-
amining.

March 6th. Study, despair-
& hope alternate, sometimes
almost mad. a letter from
Lut said about Dep. pleasing
but what about examinations
prooking.

March 7th The morning
covered, a thick veil obscured the
sun & he no longer diffused his
cheering rays on us. Disponding
mortals! the snow ^{now} falls fast
the wind now blows high, &
winter sets in a fresh, the fields
broad are clad in pure white
crystals of water. Studying &
dreading, portending evil &
chagrin. A fortune favours the
brave, & I will put courage
on!

March 8 The thick clouds not
dispelled, — But 2 o'clock the
sun appears & the cerulean
heaven delights with its serenity
Was at Boston this morning
he talked of the appointments
of Surgeon General, thinks
them highly important —

Despatched a letter home this
morning. Called on Boston —
appointed Wednesday for exam-
ination: Some how my spirits
which have so much pined of
late revive, cheering hope has
visited & dispelled discouragement
& I feel better than I ever did
before. I really was never
so well in my life. Altho' I
attend strictly to business & study
from morning till 12 o'clock
yet heartily, bold & merry Sans
Deo Altissime. Amen

March 9th. Fine weather &
walking - good spirits. Called
on Dr. Rush & told him what was
my Dis. He thought I had returned
without calling on him, sorry
my character is so bad. Told me
he was doing all he could
for father.

March 10. Fair. rain, wet, scarcely
been out. quizzed in morning with
Allen & Watson, studying Surgery.
at Dr. Barton in evening. I heard
^{fully fear} from his eye that he will cut
up my dissertation. However if
he but touches me on ammonia
I will pass like grease thro' a hot
tunnel. Portend sad news from
Sachels harbours & dread it more
than rejection.

March 10th.

Human nature is like the various situa-
tions in a city, for we find no man but
that has not among a certain collection
of qualities a great many good ones.

"Absence of occupation is not rest"
a mind quite vacant is a mind
abstract Careless —

Rain — good spirits —

"with speech so sweet, so sweet a voice."

"They excommunicate the Spleen,

Green

March 12th Reading Thrush on the
mind, delighted with it & have
run thro' all his works cursorily
as a review only. Must study
them hard. fog, wet. The sun
has not enlivened us. Mr. W. P. L. etc.
has returned.

March 13th I thought the exam-
ination the snow topped ~~alps~~
raggy alps which would require
the spirit of an Hannibal & the
vinegar of human industry
to pass it, but it has descended
to our hill which one has
difficulty to see.

A dry March is said to cut up the
causes of Disease, I have been wet
raining foggy - I snow almost
every since the month com-
menced. No almost the first
time, I have been dry walking

Despatched my letters by Mr
Appleton, enclosed letters for Miss
Stewart, she very kindly offers
to send her for me & with a
great deal of feeling, I as usual
could not say what I should
and offer all the services I
can render her. She seems
distressed.

March 14th Study, cheerful,
walked up & down market & saw
a marvellous sight of people men
women, ladies, & children. A Dry
day, pleasant, yet cloudy & misty

March 15th. Studying but without
must advantage. My time draws
nigh and as it approaches I feel
less & less till this evening I took
a little. I call on Dr. Barton to
tomorrow & breakfast. He exam-
ines. I answer his questions of
I can. Tomorrow is the critical
day. Tomorrow $\frac{1}{2}$ past 12 o'clock
commences the trial, the result
of which I expect will give me
joy unspeakable. I have
enjoyed in anticipation & I
feel as if the rule I have
laid down respecting the allo-
cument of pleasures to each
gratification would have
some exceptions. Watch & pray.

March 16th. The clock strikes
12. I am as near crying as any
question can be. Fear nothing.

yet have much to fear. I hope
much as fearing much to hope
for. I dread not for I see
nothing terrific. The day
lunars. the rain falls, but the
sun shine of hope illumines
my mind. Transports seize
my heart & joy possess my
soul. I saw *D. Bastoni* the
ful blew *Magnolia conspicua* -
with its willow caducous *Prunella*
& its acalyceous delicate & pure white
petals. and its many males &
females, with red receptacle -
I saw the *Ornus Europea* which
produces the *Marmos*. - the
Prastonia - just rising from the
branches of the *lybe-nacul* -
the *Pyrus japonica*, with its
scarlet petals just bursting from
the calyx.

at 12½ o'clock I entered the
counterspanned room, to my
utter astonishment Mr Barton
complimented my thesis ex
travagantly. He said he had
not seen or read any one with
more pleasure for some time
& suggested many things
concerning it if it was published
that it would do me much
credit & the institution, & that
if we might judge from this
specimen, we should expect
that I should become eminent
in Nat history &c &c. I was
so moved that I rose up,
set down, rose up & set down
again. pulled off my coat
had, laid it down, took it
set in down, took it up
again & put it on & then

pull it off again. I pull my
coat over my shoulder as
if to take it off & then refixed
it again. He then questioned
me on Materia Medica, Quin-
sinnonia - Physics in the
place of lectures to me by the
shamblings & crippled me
so that I hopped off -
then amputation below the
knee - Case and Nitrogen &
its combinations. Dr. Bushon
Vaccine pustle. & Pulmonalis
Did pretty well. but I might
have been more fortunate.
I returned home gay full
& receiving congratulations -
Dr. Stearns saw Mr. Bushon
& walked much with him
taken of Washington State

me that the Presidents
house was an elegant buildg
granite & marble & very large
& the Capital marble, large
unfinished & superb - roads
terrific. Mr Austin took tea
with me. Evening went to
Dr Otto's, & Dr Curries. Mr Emory's
supped & to bed. Rose in the
morning, & put away my
books & papers, & sat to
writing letters. as fast as possible
Austin called & we went to
Mr Stiles, La Bretons, to
inspecting room thence to Mrs
Lyets & called on Mr Prentiss.
From there to Mr Simmons
Dined at City Hotel, called
on Mr Paulsen, called in
forenoon on Mr Harris &
this evening likewise, thence

to Boston & thence to D'Allena
I feel as if mount Olympus
had fallen from my shoulders
after having rested there a long
time. Rain & clouds, misty.

March 10th. This day I went
to Mr Hains' & got my letter &
30 Dols in it, but this is not enough.
I owe - 30 Dols out.

Went to Peale's museum. The
first sight I saw was the stupendous
mammoth, & under it a little
manus / skeletons. The smallest
metacarpal bone of this huge
animal would suit weight & all
since bones in Philadelphia.
I saw the Platypus americanus -
from New Holland, having
the legs & beak very like a duck.
The ferboa or long tail's ~~manus~~

of eggs & mice. a most
beautiful collection of stuffed
birds, a large one of insects
& a pretty good one of minerals.
spent the afternoon in examining
the birds &c. learnt something.
saw the Chama Gigas. Many
Buccinum Torbones &
Trochi fossils as well as Marine
Buccinum trotius. — Argonauta
argo — Nautilus. Medusopora
Pipis — &c. &c.

March 19th. The sun did not
rise clear but I believe we
shall have a fine day. The
sky shows the beautiful
arcus. — noon It has proved
a delightful day — the Ladies
crowded the streets, & of course the
gents. — I had the fortune to meet
with the fair E & enjoyed myself
highly in company & friend W. J.

Saw a fine specimen of Platinum -
manufactured or rolled by a D'Arrol-
man. 3 Dols. per oz. & I am to have
a beautiful specimen of Acetate, which
I shall value highly not as a spec-
imen but for the donor's sake.
was at the hospital & I do not know
whether I have learned any thing.
The patients are mostly incurables.
& little is to be learned. A patient
called on me ~~yesterday~~ to day-
when if I find tomorrow having
a tense pulse, I shall direct a dose
of opium. May be only a diarrhoea
or a disease of the Liver. or something
like cholera morbus. Mr Harris at City.

March 20th Went to the hospital
but as it is filled with incurables
learn't little. Walked with Mr H
& to the Academy of Fine Arts. Was
highly entertained there. The statues
are fine. They are models by
the most exquisite sculptors.

I will not hazard my opinion
on the works of West & Co I have
seen them prove frequently & the
glare of colouring is ^{made} ~~is~~ ^{perceptible}
by habit. Sir Joshua
Renolds paper by the famed
painting of Rubens - Raphael
& Titian & fix his attention on the
more glaring colours of the Flemish
school. If he with the penetrating
scrutinizing eye of a painter saw
not the perfection of the colours.
by reason of the close imitation
of the ^{grand} idea of the perfection of the
human form which they study to
acquire, ^{if he} could pass this by.
I am sure I ought not to be
struck with the beauties of West,
untill I have viewed them over
& over again. The works of Burch are
exceeding good. His shipwrecked Sailor
is very well done so is his view of
the Delaware meadows. The paintings
are elegantly disposed, the father

of our Country by Stewart of course
has the most conspicuous place. There
is an admirable painting of the Death
of Abel, He lays scullly dead on the
canvas over a pile of oak sticks & the
fattering furnaces smoke & the faggots
seem to crackle. — The bust which
we have called Galen is of Plato
Cicero, resembles ours but is inferior.

~~It~~ The expression of intense
thought in the contraction of the Depres-
sures anguli oris is not so fortu-
nately executed. On the whole
far inferior. I admire the bust
of Victor Nefton, the pride & Glory
of England, she not the world can
not boast an equal.

Ever since the death of this Gallant
admiral, the navy of England has
declined, No signal victory, nor suc-
cess which would weigh as any
thing in this war. But England
has received a dreadful shock of the
~~transient~~ tremor of which she has
long to be sensible, perhaps too the
predecessors to a shock which may

shake her throne from its foundation
& throw the debauched Regent from
the pious seat. &c. His a partial
Paralysis which may increase
into a Palsy that the cure the
whole ^{of every kind} ~~of~~ ^{from} the lowest
minion to the modern Rebelled
messars. Hull has broken the
charm - Jones has prolonged the
intermission of the spell of Decadence
and Brandedge has, have,
wrenched the mysterious war
from the hands of the sovereigns -

at evening I went to Dr Currier to deter-
mine whether I should go to the Col. "Pat."
I found I was not going & was heart
sunk, but others could supply the
defect in some measure, for imag-
ination will be at work & they help
it tardy motions. I danced ~~was~~
merry, with in extacy - was
delighted, enjoyed myself - and
why not. man's life is but a span
let innocently enjoy it when we
can.

I danced with Miss G. Miss W.
& her sister, twice over Miss Favers.
and at last did a gallant act give
up Miss G to another but at her request
I could be affronted, if she should
be when by herself solicited, a
can give up her hand. We had
room to dance & not obstruction -
It was not like dancing in a tub.

Sunday Morning March 21th
Went to Meeting and what I
abhor most, I was late & could
scarcely get a seat. However I saw
after meeting all the ladies with
whom I was so happy the last night,
& I met them three times as I walked
the streets with Dr Middleton & I saw
I caught a delightful smile from E.
& I meant to return it, but perhaps
it was checked, like voluntary motion.
I would have moved forward &
my left leg pulled my right
one back - I lifted up my hand to

take off my hat but before I could
touch it my limbs were as stiff
as if seized with catarrhs & my
~~will~~ neck refused to bend in
submission to my will, an del-
osed. Sometimes I say "a faint
heart never won a fair L. y." There
is a moment in the life of almost
every individual in which the
decision of his character will deter-
mine his fortune. A steady cour-
age and unpinchable perseverance
in the ways of well doing, without
obsequious servility, without
forwardness, but still a respect
for oneself, ~~will~~ ^{will} ~~therefore~~ ^{therefore} anything noble
for oneself. There is a display
of spirit necessary to the support
of character. He who once
stoops will soon be obliged to
kneel - others will encroach
on the advantages you had not
the courage to make your own.
This may be exemplified.

a gentleman should always take his
seat next a lady, if he cant do it
without impropriety, because another
will avail himself of the opportunity
by thus you lose by your modesty
when a ~~man~~^{person} throws of this faint
heartedness he becomes a man.
He can render himself easy in com-
pany & if master of himself expect be
to others. Apply this to every thing
agreeable. Whosoever has a mean opin-
ion of himself will act in no higher
capacity than he has allotted him-
self in his own estimation. Study
this lesson - repeated - ponder its
truths - let it be like a mirror
before your eyes, ~~reflecting~~^{but} not
like the mirror of Lao reflecting
what you really are, ^{so that would dishearten} but ever
presenting the grand idea of
what we should be. —

In the afternoon I went also to
meeting, I blushingly confess my
self disappointed for I went not to
meeting, to hear of the preachers or to

mor alone, but tries to catch the
glances of love, & to restrain the
~~the~~ raptures from ^{the} extatic ~~eyes~~
speaking eye. what a confession!
'Tis the frailty of human nature -
'Tis the feeling of a young man -
'Tis the warmth of the heart, the
ardor of my soul. without it
it I should cease to be a man.

I walked much up on down sand
was seen - In evening to Durin
spent there two hours - was disap-
pointed - alas. human weakness -

Monday. March. 22. 1813.

awake happy - eat with pleas-
ure - so I think I am happy but
who pays for it. there the rub -!
I call on D Otto not a home thence
on Mr Rodman not at home -
D Dejeu not at home. D Otto
not at home. On Mrs Currier
with her about ten o'clock met

Miss C's & E. walked with them &
to ~~the~~ E's - & there staid with
pleasure & gazed - but was confounded.
Mr. looked cold as I thought, but when
I found Mr Currie was with me
he brightened & ventured say a fine
day, &c. So, but we soon filled
up. I went & called on Miss Warden
(who would think I could become
such a beave all at once) but talked
fast & long, was asked to call again
& I will go - ———. Returned
to Mr Currie's: afternoon called on
Mr Ewing, Dr Otto's, Dr Dupont.
Mr Marshall's.
Paid my debt to Dr Otto's. The evening
as spent a Mrs Partridge, was joked
&c. &c. pleased - talked Divinity -
religion, unreligion, Philosophy -
Dism materialism, medicine &c.

26
~~Monday~~ ~~to the forenoon of Monday~~
Keller

Tuesday. March, 23^d 1813.

Called at Dr Glentworths - I delight
in neatness. I would never wear
a bonnet because I was too lazy
to make ~~my~~ hair look neatly.
I must beware of morning calls ~~that~~
pos. Talked of this & that -
painting - Mrs Stewart. - thought
a strange animal - too true.
called there with letters intro-
ductory, as going out was told
should be happy to see you again,
she turned and said - I know
the rules of etiquette as well as the
Philadelphians. Miss B. meant
to call on her. ~~But~~ ^{in her} it was more
than usually politeness ^{in her} to say -
I shall be see you again, but this
pretty speech prevented her & Mrs
Stewart lost the acquaintance of
a fine ~~and~~ sensible & I had
almost said beautiful young
lady.

at D.C. I was asked if I was going
to Dr. Glenn's "Thinks" "to myself" "this is
strange, how should this happen I
only knew of it a few minutes before
leaving my lodgings. After this I
understood from them, that I was to
meet them & had high expectations of
me. Thus am I put into trying
situations. I know that great things
are expected from me, & I am ob-
liged to act up to it. It is well I
am in such situations. under an ob-
ligation to push myself forward -
called on Mrs. Ewing, & Seybert -
neither at home. After noon to D.C.
to know if I had the right message.

A seven to Dr. Glenn first calling
for Mrs. Currie. Where I meet the
Miss Higgins, they look at me
with such a scrutinizing eyes.
(old maids). I thought I should go
into a quarrel, upon my life.
They look at me to see if they liked

me. I don't know it for they believe
that I am in love, and they feel
some interest in it.

At Dr. Glen's we spent an agreeable
evening. Fine singing & music from
Mrs Glen & Miss Edmixon. I rattled
nonsense with Miss G. & a long time
but how far beyond her is her sister
Frances. There a seriousness which
yields only vivacity not to unmean-
ing quipping. There is a dignity of air
which inspires respect. He who
get her for a wife must love &
respect her. He get an heart worth
possessing. She looked divinely -
like Diana with the crescent in
her forehead.

The most ridiculous thing
I ever saw was here displayed. A
card man who made most wonder-
ful manoeuvres, appearing very
exactly the actions of the hornpipe
dances. It is moved by a string.

by a lady who feel the music in the
fingers ends. I had the felicity to
meet on F. & really I do admire
her. She is lively, yet sensible,
her conversation is
is not rude & light. It will please
altho' not accompanied smiles. But the
genous excellence of I may use such
an expression consist in laudacious
unmeaning laughter. I have that
divinity which moves within me
blessed our party I would have
tasted the bliss of Elysium. I should
soon over whelmed with ecstasy!

(Should any one ever read this rapidly
they would think it romantic but
it real & till now I knew not the
truth of what novel teach us. Just
so silly in prided human nature)

Wednesday March 24th. Received
a note from Mrs Otto inviting that
the ladies Lewis to meet on Thursday
were engage to Tuesday following
when I meet them & also inviting

to accompany to her brother which I
of course accepted. Went towards
St Curries but saw C. & M. & E.
walked settled the matter that
I should accept Miss Clarke's
invitation. In afternoon read
"Things by eight names" - I went
to the parade & reviewed a reg-
iment of Cavalry.

Mr Allen & myself amused our-
selves in walking about the streets
& counting the women as they passed
only one in 8 of which were hand-
some. None and then we would
meet two or three together and at
a certain window we saw a
beauty - She was indeed all
I have before seen - Miss -

When got home I really to meet
the Ladies at Mr Todd. I really
we had two beauties if not three.
I talked & laughed as if I had

men old acquaintances. but never
had seen or spoken to them before.
Miss B. is a beauty. Mrs H^d
usually pretty & engaging. Music
many among, Quaker meeting, &c &c
alternately. — A great light was
seen in the south last night for
many hours. The conjectures were
that the English has burnt Wilming-
ton or Newcastle. Some thought of
the fort either of the Brandywine mills.
At 12. o'clock I turned in & slept rather
too soundly.

On Thursday I awoke & did not rise
found it was ~~very~~ & was very cold —
until 8. o'clock. Between 11 & 12 —
I walked out & visited Miss Clark &
excepted her invitation, but I had a little
intimation of I thought that they had
omitted it, or waver it till another oppor-
tunity, & I am very much afraid
that I have put them into a quandary.
But I can't retract. I fear she will
not be there — I dread a disappoint-
ment. — In hence returning I
had the pleasure to rap at Mr Collins'

door. He was just letting some
one out of a lecture in. He talked
of the ^{chemical} Columbian Society's book. He
says the speeches as if they could con-
travert by their explanations the ideas
of Davy. He I mentioned to
him his promise to give a spec-
imen of Zeolite. He said he never
forgets his promises. He asked
into the parlour & left me there
with E. but not alone, for who
should be there ^{with} Mr. Clark. My
senses are gone in E's company - I
must gaze a long time before I
can be very sociable. We talked
a long time and laughed. I believe
I should have filed off sooner, I
will next time. Mr. Collins gave
me a beautiful specimen of Zeolite
in cavities on indurated clay -
Cubic & octahedral tables. I botryoidal
and radiated concretions - beautiful
specimen from Sicily. Thus I got
something beside a sight of the
precious jewel.

Afternoon went to Mr Hain's and he
show me some minerals but they are not
so good as mine. Injured many of
them, bruised rounded, cracked. He has
no very good specimens of anything.
He has corundum, but poor. Beautiful
opal amethystine quartz Delaware...
Semiopal from Trenton. Turcon from
Trenton. Beryl from Trenton.
Has a very large specimen of tur-
maline, terminated.

At seven I went to Mr Clark's &
found E. delightfully. Her figure
showed to the best advantage & her white
sash contracted with coral beads
beads was too much exposed. This too
fascinating a sight for every eye. The
ladies should remember this golden
rule with dress ^{regard to} ~~that~~ ^{their} men most
prize that which is concealed when
it becomes common. I would not
fear to make such an remark to herself.

Her disposition is so much forgiving
that she would not have been offended
Some young ladies more. I believe
me from that vice & from such
ladies. I made the same obser-
vation to E & she most perfectly
agreed with me - I never
heard her say or slip any thing
like it. It would shock me,
but I believe that she will
be more guarded. She will
do right always! This I am
confident in asserting, for by
the intention only can we judge
between right & wrong. When
she believes herself right I will
acquiesce her, should she be
so wrong. A lovely simplicity
is the striking trait in her
character, altho' she dresses
too gayly, tho' her good sense
will before long correct. She
is a wonderful example

of want of vanity. Altho dressed elegantly, & with high collars & other flourishes, yet she appears not to regard herself at all. I never led her into serious conversation, nor indeed have I the courage before folks. But I wanted to well commence on some trifling occasion & try the strength of her mind, & search her principles. As she is young she will change much of the levity so conspicuous & frothy now will be turned to a dignity of air that will insure respect as well as love. I wanted on her to her father. I wished to bid her good night with warmth. She only wished I might soon see Mr B. The frequency with which she introduced this name convinced me more than any thing that
— which God grant

I only dared to take her hand
but heaven, this strange love-
stops my thoughts! The
current of my thoughts returned
I am struck dumb! I once
dared to kiss her - I strolled thro'
my many houses, even to the
morning. I believe we accorded
well, one card being touched
the thousand strings of both
instruments vibrate mutual
harmony - which God grant
at half past eleven got
home & turned in but
rose not until 8 o'clock.

Friday, March 26.

wrote all the morning called on
Dr Seybert. - Mrs Ewing - not a
home. called on Mrs Currie to
ask how she did told me that
something sweet had disagreed
with her, and given her the colic.

which still continued. Miss Hamilton
entered & afterwards walked with them
to E's but dared not to enter. Returns
and ^{read} a little — dined and in the after
noon when to D^s Coxes but feared to
quit D^s Ruches — and now I dread
to get home. — What is the spell that
thus affects me. & that I ^{could} dispell the
cloud forever. — ~~at~~ Hence
to D^s Otto's Mrs Ewins & D^s Seybert's
not a ~~home~~ home. Went to D^s Allen
& found him & D^s Salter, we talked
quizzically, and laughed greatly.
In the evening I went to Mr Emory
& waited all the rest of it entirely —
went to bed at ten but the second
time since I have been in this
city.

Saturday 27th March —

Quite cold & threatens snow, but
the air is very dry. & electricity works
well, my boot lappels stand out
& even the friction of running up

stairs so accented them that my
fingers would attract the silk.
It has remained all day & now
my tafels are in a untown. I
can not account for it. The Ther-
mometer is about 40.° & the sky
overcast, & perfectly dry. But
I suspect that the blackening has
everted the silk & that gives it
its electric properties chiefly. It
is wonderful electric. They were
attracted by the iron by my pen
& even by my finger. I called on
D^r Saybest and was surprised to
find so young a man. I thought
him an old plain dress Quaker,
but he is a quick, active, sensible
man. He recommended me to
see the collection of the Cabinet of
Sciences, which was his. Also W.
Wistar's. Mr Collins'. The Philosophical
Lectures, & Dr. D. Bartons. He gave
me a specimen of native silver from

South America in Lime Stone. Was
extremely polite. After this I set
out to walk & thought to myself
after having passed 5th St. that I
would ~~not~~ go to the Library & look
at Annals, & turned about, but "thinking
to myself", perhaps I may meet
somebody I know - so I will go thro'
Library alley - I saw as I crossed a
lady having the air of E but not
the dress. I seem prepossessed that
it was she but dared not look and
did not look at her. I went thro'
the alley in full expectation of seeing
her, and so it turned out for there
she was. Had I have seen her
going out of her father's house I would
has said you will not walk out
with this dress. She asked imme-
diately, How come you to say you
were afraid of me yesterday - I
blundered out an answer - we went
to Delmar's & there set of laughing
lacked nonsense, exchanged photo-
grams in afternoon.
